## QUICK START

# Your site, edited in plain English.

Describe the change you want and the Website Editor makes it — no HTML, no theme files, no developer in the loop. Every save is versioned, so nothing you write can be lost.

1

### Open the Website panel

The editor lives inside your Command Center. Same login, no second tool.

2

### Say what should change

"Make the header say we are open Saturdays." Plain sentences, not tickets.

3

### See it before it ships

The change renders in place. Keep it or discard it — the live site is untouched until you save.

4

### Save, and keep the history

Every version is snapshotted first. Roll back to any earlier save at any time.

5

### Let the answers follow the site

What your site says feeds what your chat and phone say, so the story stays consistent.
